Digital Product Launch Checklist

Fanny Mae Publishing | Built from the Cozy Christmas Stamp Pack launch (Nov 2026)

Use this in order for the next pack. Boxes are the steps that worked. 'Avoid' lines are the mistakes we made the first time and how to skip them.

1. Decide the basics before building anything

☐ Pick the product, price and promotion route in one sitting. Cozy Christmas: $8 full pack plus a free sampler, organic Pinterest only, goal is sales before the holiday.

☐ Pick the storefront FIRST and prove it fits your country and payout route. Check, in this order: can a seller from Jamaica sign up, how do you get paid (PayPal to Wise worked), what are the fees, is there an approval wait.

☐ Write down the fee maths for the chosen storefront. Payhip free plan: 5% per sale, PayPal pays you directly, no approval wait.

AVOID: *We spent days on Digistore24 before checking the fit. It had a vendor approval wait (up to 48h on weekdays), 7.9% + $1 per sale, payout fees ($2.50 ACH or PayPal for US, $20 PayPal outside the US, $40 wire with a $250 minimum), a per-download vault fee, an unresolved contract question for a Jamaican vendor, and support tickets that went unanswered. Etsy and Stripe are not available for Jamaica. Rule: no building on a platform until sign-up, payout and fees are confirmed.*

☐ Create one tracker (Jira project FAN) with a task per step below, so nothing lives only in chat.

2. Make the artwork and files

☐ Higgsfield: draft at low resolution only, get approval, then generate high-spec finals, then upscale only the approved finals.

☐ Check the downloaded finals for any watermark (still open: FAN-13).

☐ Lay out printable sheets: US Letter and A4 PDFs, 3 x 3 stamps per page, plus one transparent PNG per stamp.

☐ Test-print one sheet at 100% / Actual size before launch (still open: FAN-5).

☐ Split large PNG sets into zips that upload comfortably (we used 4 zips of 9, 9, 9 and 6 stamps, 65 to 117 MB each).

☐ Write READ_ME_FIRST.txt so it matches EXACTLY what the buyer receives.

AVOID: *We first uploaded only the PNG zips and forgot the two PDFs and the read-me, and the read-me still described a folder that no longer existed. Rule: write a file list for the product first, then upload against it, then re-check the buyer download page against that list.*

☐ Free sampler: 6 stamps on one page, US Letter and A4. Put a QR code and the full-pack link on the sheet from the start.

3. Set up the storefront (Payhip)

- ☐ Create the account with the business email, connect the business PayPal, confirm you can withdraw PayPal to Wise.
- ☐ Account Settings > Login Settings: set the Support Email to the buyer support inbox. Payhip shows it on every receipt.

AVOID: *Receipts first showed the main brand email, so buyer replies would have landed in the wrong inbox. Set this before the first test.*

- ☐ Create the paid product: clear title, price, cover image 1000 x 1500 (portrait), full description, all files uploaded. Save the statement description.
- ☐ Create the free sampler as a separate $0 product with its own cover and description, linking to the full pack.
- ☐ Choose visibility on purpose. Visible shows in the store. Unlisted hides it from the store but still sells through the direct link. Invisible breaks the link, never use it for a live product.
- ☐ Have the buyer support inbox (fannymaepublishing.help@gmail.com) ready before creating the product, and connect the brand, support and other inboxes to the assistant tool so receipts can be checked.

4. Sales page

- ☐ Single page on GitHub Pages (repo cozy-christmas-stamps). Brand it Fanny Mae Publishing. Ahmazing Stores is a separate business, keep it off this page.
- ☐ Set BUY_URL to the paid product, SAMPLER_URL to the free sampler and SUPPORT_EMAIL to the support inbox. Make sure the sampler links are visible against the background.
- ☐ Open the live page on a phone and tap every button.

5. Test everything before sending traffic

- ☐ Make a temporary 100% coupon, buy the product in a private window, open every file on the download page, check the buyer receipt and the seller alert.
- ☐ Repeat for the free sampler and download it.
- ☐ Do one real card purchase of the smallest paid product to prove the full path.
- ☐ Delete the coupon straight after testing.

AVOID: *Expect PayPal to hold the first payments of a new seller for up to 21 days. A held payment on your own test is normal. The buyer still gets the download instantly.*

6. Pinterest

- ☐ Business account, keyword board names, one-line board descriptions with the same keywords. Check that each description sits on the right board (two were swapped on our first set).
- ☐ Six pin images, 1000 x 1500, each with a title (100 characters max), a description with hashtags, and a link. Free sampler pin links to the sampler, all other pins link to the sales page.

☐ Post 1 to 2 pins a day to one main board each. Repin to related boards a few days later, not the same day.

☐ Declare AI-generated art honestly, in the product pages, the read-me and (optionally) the Pinterest AI label.

☐ Keep books-for-kids boards (bedtime stories, counting, picture books) for the book pins, not stamp pins.

☐ For pins posted through the assistant, the image must be on a public web address. Never host paid-product files publicly to do this.

7. After launch

☐ Check the seller inbox for 'You've Sold An Item!' emails and the PayPal balance for the held payment.

☐ Decide the Black Friday / Cyber Monday deal before Nov 27 (FAN-15, $5 idea).

☐ Update the tracker and this checklist with anything that went wrong on the next pack.

Mistakes to avoid, at a glance

- Choosing a storefront before checking country fit, payout route and fees (cost: days on Digistore24).
- Waiting on a platform's support instead of testing a faster alternative in parallel.
- Uploading incomplete product files, and a read-me that did not match the download.
- Leaving the receipt support email on the wrong address until after the first test.
- The first sales page carried the wrong brand (Ahmazing Stores is a separate business). Fixed to Fanny Mae Publishing.
- Pasting board descriptions onto the wrong boards.
- Planning the sampler without a way back to the paid pack (fixed with the QR code and link on the sheet).

Still open on this launch

- FAN-5: test-print one sheet at 100%.
- FAN-13: confirm Higgsfield downloads have no watermark.
- FAN-15: Black Friday / Cyber Monday $5 deal, decide before Nov 27.
- FAN-12: Digistore24 ticket #4083076 unanswered, platform on hold.
- PayPal hold on the first $8 payment, up to 21 days.
- Swap the two reversed Pinterest board descriptions.
